STAR SHINE EASY BLACK

Black water-based polishing cream for suitable black surfaces

STAR SHINE EASY BLACK restores the shine of suitable black porcelain, granite and quartz surfaces. Its chemical and mechanical action helps close superficial porosity and makes daily maintenance easier.

Properties

Water-based and wax-free according to Faber. Improves shine, helps restore colour and increases resistance to foot traffic and soiling. Agitation can make the consistency creamier.

Suitable materials

For indoor and outdoor use. The BLACK data sheet lists black polished or lappato porcelain stoneware and black polished or finely honed granite. Quartz is also mentioned in the product description. Always test on the actual material first.

Technical properties

Base	Water-based; wax-free according to Faber
Form / colour / odour	Cream / black / odourless
pH	2.5 ± 0.4 (acidic); neutral pH = 7
Density	1,110 ± 10 g/l
Coverage	40–50 m²/kg, Faber guideline value
Packaging	5 kg; 4 containers per box
Shelf life	24 months, originally sealed, cool and dry

Application equipment

Single-disc machine with 2 HP and a white pad; Faber prefers 2.2 HP. A manual rotary machine is also mentioned.

Manufacturer and product responsibility: Faber Chimica S.r.l.

Preparation and application

01 Test area

Test on an inconspicuous area or an unused tile. Assess suitability, shine and colour before treating the entire surface.

02 Clean and protect

Carefully clean the surface and remove dust and dirt. Protect adjacent materials that must not be treated.

03 Mix and spread

Stir or shake thoroughly. Use undiluted and work in sections of about 1 m². Coverage of 40–50 m²/kg mathematically corresponds to approximately 20–25 g/m²; use the test area to establish the practical quantity.

04 Machine polishing

Use a white pad with even circular movements. Polish until the product is dry and continue working to loosen any remaining residue.

05 Repeat if required

Repeat for greater shine or improved superficial sealing. According to Faber, correctly repeated application does not cause overlapping defects.

06 Rinse and clean

After polishing, rinse thoroughly with water and vacuum up surface residues. Clean tools with water. Remove all residues before returning the surface to use.

Maintenance, safety and storage

Daily maintenance

Keep the floor clean and remove loose dirt regularly. Choose a cleaner suitable for the material and finish; test beforehand if in doubt.

Black pigment precautions

This variant contains black pigment, according to confirmation from Stone+. Check the colour effect on a test area and protect adjacent surfaces. Use BLACK only where testing shows a suitable result.

Safety

According to confirmation from Stone+, the base STAR SHINE EASY SDS, Faber revision 4 dated 18/04/2025, is also used for BLACK. Statements: H315 Causes skin irritation. H319 Causes serious eye irritation. EUH071 Corrosive to the respiratory tract. Wear suitable gloves and eye/face protection and follow the full SDS.

Storage and shelf life

Keep the original container tightly closed in a cool, dry place. The specific BLACK data sheet states a shelf life of 24 months in originally sealed packaging under the prescribed storage conditions.

Source and version

Translation and Stone+ adaptation of STAR SHINE EASY BLACK TDS EN, revision 0.0 dated 23/01/2020, found on Adonline Drive. This is the specific BLACK data sheet located; no newer BLACK version was found. The photograph is digitally edited; the manufacturer label has not been verified.

Technical data sheet and SDS

The BLACK technical data sheet states pH 2.5 ± 0.4. The base SDS states pH 2.1–3 at 5% concentration. These measurement statements are kept distinct. This product sheet does not replace the full SDS.

Application conditions

Suitability and results depend on the actual material and working conditions. Always carry out a preliminary test. Contact Faber or Stone+ if in doubt.
